

## Artificial Intelligence & Generative Artificial Intelligence

Artificial Intelligence (AI) is the creation of machines that have human intelligence and can think and learn like humans. Generative Artificial Intelligence (Gen AI) is a type of AI that can produce or make content, such as text, images, or music without direct human guidance.

ServiceNow uses AI and Gen AI to a good extent and below are some of the features we discussed this week:

- Predictive Intelligence
  - Document Intelligence
  - Task Intelligence
  - Now Assist
- 

## Benefits of Predictive Intelligence

- Decrease costs
  - Save time
  - Increase efficiency
  - Increase satisfaction
- 

## Predictive Intelligence frameworks

ServiceNow Predictive Intelligence offers four different types of frameworks.

- **Classification** framework: Categorized by having each request automatically directed, eliminating manual issues.
  - **Clustering** framework: Group similar records into clusters so you can address them collectively or identify patterns.
  - **Similarity** framework: Surface similar tasks and content to predict new major issues and recommend critical actions.
  - **Regression** framework: Take historical data and train it to predict numeric outputs. For example, predict the expected time to resolution on incoming incidents.
-

## Benefits of Document Intelligence

With Document Intelligence, agents can:

- Categorize any type of record.
  - Use feedback-based AI to automate smartly and learn continuously.
  - Incorporate document processing into workflow processes.
  - Accelerate data extraction from documents.
- 

## Benefits of Task Intelligence

With Task Intelligence, agents can:

- Resolve problems more quickly for improved service and outcomes.
  - Concentrate on work that is significant and worthwhile.
  - Reduce error rates and cut down costs.
  - Provide good user experiences.
- 

## Now Assist

Now Assist is the Generative AI feature of ServiceNow that helps with reducing manual work for agents, deflecting cases, creating content automatically and making developers more efficient.

---

## Benefits of Now Assist

With ServiceNow Now Assist:

- Developers can be more productive when they develop code, apps, and workflows.
  - Customer support agents can provide a personalized customer experience.
  - Admins can be efficient with platform maintenance and developing enhancements.
  - Employees have access to what they need when they want it.
-

# QUICK REFERENCE GUIDE

## Generative AI capabilities mapped to Now Assist Product Offerings

The following graphic illustrates how Gen AI features correspond to our products and workflows:

# QUICK REFERENCE GUIDE

## ServiceNow Gen AI capabilities

The below displays the use-cases/features included within each category of Generative AI:

| Category           | Features                                                                                                                                                              |
|--------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Summarization      | Chat Summarization<br>Case/Incident Summarization<br>Work Order Tasks Summarization<br>Feedback Summarization                                                         |
| Generation         | Resolution Notes Generation<br>Knowledge Article Generation<br>Flow Generation<br>Code Generation<br>App Generation<br>Playbook Generation<br>Catalog Item Generation |
| Virtual Agent (VA) | VA – Conversational Catalog Requests<br>VA – LLM- Based Topics<br>VA – Conversational Demand Requests                                                                 |
| Other              | Flow Recommendation<br>Alert Simplification<br>AI Search – Q &A Genius Results                                                                                        |

---

## Now Assist Framework

The Now Assist framework enables various Now Assist product features on each of the ServiceNow workflows. Use the **Now Assist Admin console** to control the required generative AI powered tools (skills) on the Now platform.

Using the Now Assist Admin console to:

- Install the required plugins for the products used.
- Explore the available skills (Gen AI powered tools).
- Assign skills to users.
- Monitor and analyze skills across the Now platform.

# QUICK REFERENCE GUIDE

**Now Assist Panel** is used as part of the framework to integrate Now Assist skills into the Next Experience UI.

---

## Generative AI Controller

The Generative AI Controller acts as a connection layer that connects to the Now LLM service and other external LLMs such as Microsoft Azure OpenAI, OpenAI, Google Gemini AI studio etc.

Please take a moment to review this informative [Generative AI Controller FAQ](#), meticulously compiled by the Platform Outbound product manager at ServiceNow Victor Chen.
