# Safe harbor notice for forward-looking statements

This presentation may contain “forward-looking” statements that are based on our beliefs and assumptions and on information currently available to us only as of the date of this presentation. Forward-looking statements involve known and unknown risks, uncertainties, and other factors that may cause actual results to differ materially from those expected or implied by the forward-looking statements. Further information on these and other factors that could cause or contribute to such differences include, but are not limited to, those discussed in the section titled “Risk Factors,” set forth in our most recent Annual Report on Form 10-K and Quarterly Report on Form 10-Q and in our other Securities and Exchange Commission filings. We cannot guarantee that we will achieve the plans, intentions, or expectations disclosed in our forward-looking statements, and you should not place undue reliance on our forward-looking statements. The information on new products, features, or functionality is intended to outline our general product direction and should not be relied upon in making a purchasing decision, is for informational purposes only, and shall not be incorporated into any contract, and is not a commitment, promise, or legal obligation to deliver any material, code, or functionality. The development, release, and timing of any features or functionality described for our products remains at our sole discretion. We undertake no obligation, and do not intend, to update the forward-looking statements.

“

Our products enable the no-, low-, pro-coder and citizen developer to intuitively build apps, and implement and extend workflows, using form, code, workflow, robot, and AI-based experiences.

Key features

- Application generation:** Generate application tables, user roles, and record producers from a text prompt.
- Catalog Item generation:** Generate a catalog item from a text prompt.
- Code generation:** Generate code suggestions from a text prompt in code, a comment, or a combination code and comment text.
- Flow generation:** Create multi-step flows with generative AI.
- Flow recommendations:** Generate a list of recommendations for the next step of a flow.
- Playbook generation:** Generate playbook stages and placeholder activities from a text prompt.

# Activate the individual skills

# Now Assist for Creator Skills overview

# Code generation

**Generate and auto-complete code.** Ask Now Assist to generate new code or refactor existing code. Works in all script editors on the platform. Custom LLM trained on ServiceNow platform code.

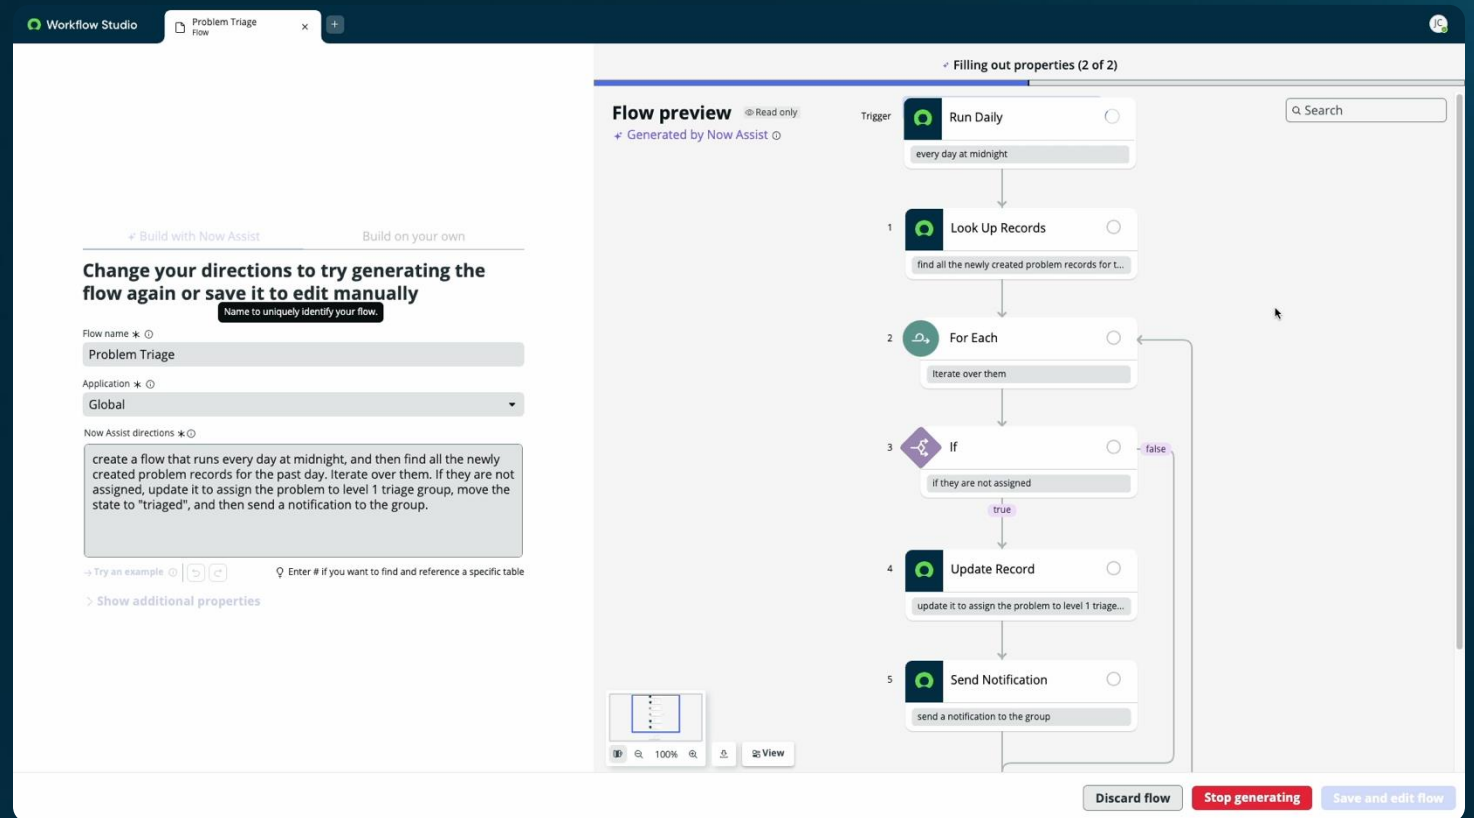

**New Xanadu features:** Improved refactoring, commenting and contextual generation for more optimized, relevant code.

# Flow generation

**Generate complete flows.** Write prompts to describe workflows including: triggers, actions, branching logic, data flow and conditions. Uses OOTB actions where possible and recommends next best actions.

**New Xanadu features:** Flow triggers and actions are generated with inputs and data fields filled out. Use a hashtag to reference a specific table in your prompt. Streaming flow creation creates understanding, improving confidence in AI.

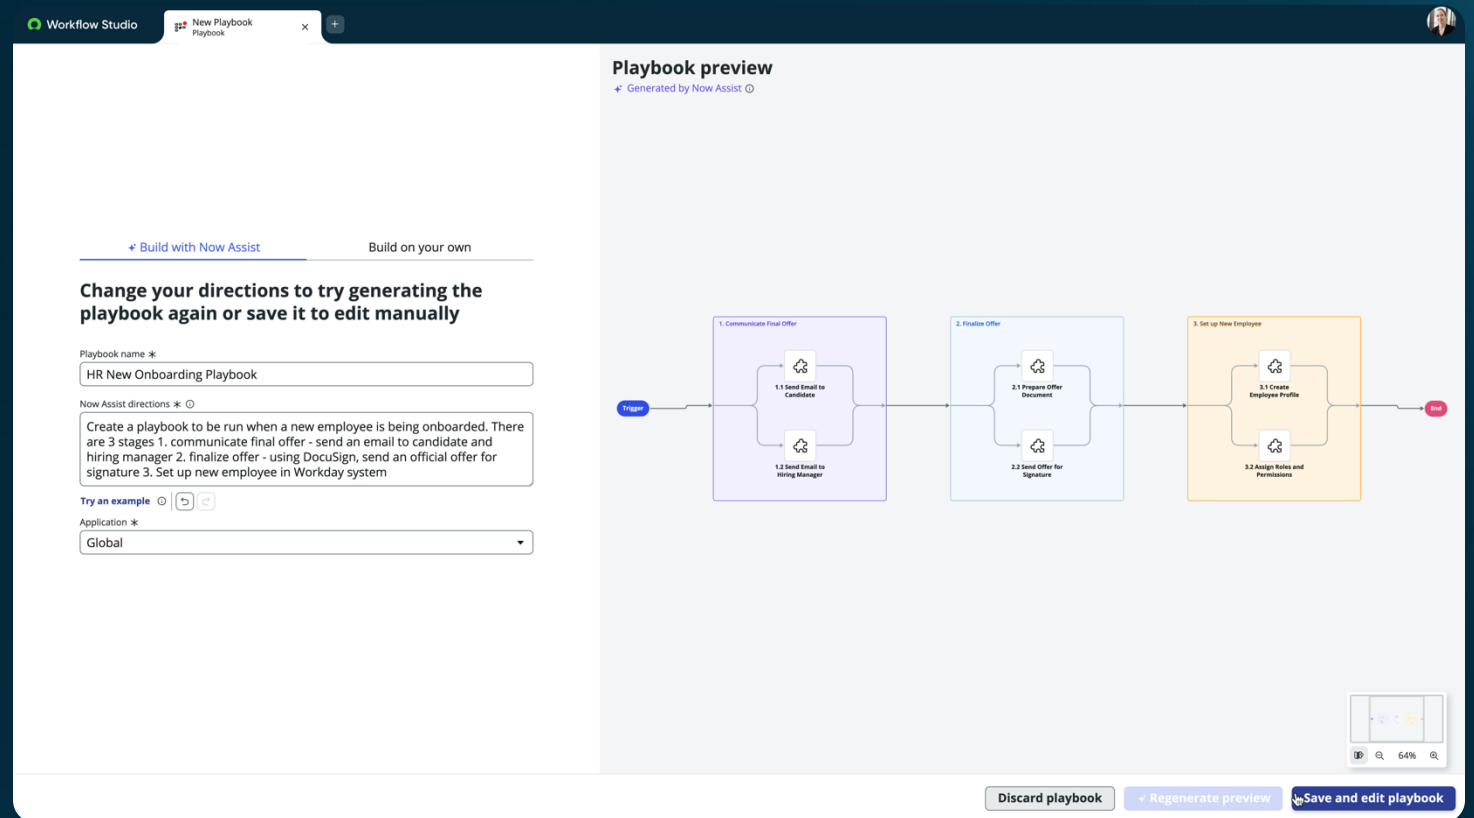

# Playbook generation

## Generate automated playbooks.

Generate a playbook from process description. Each stage of the playbook is mapped out and populated with OOTB, custom or placeholder activities.

**New Xanadu features:** Populate stages using relevant OOTB activities. Create a playbook by uploading an image. Building Playbooks from design assets reduces the time to publish.

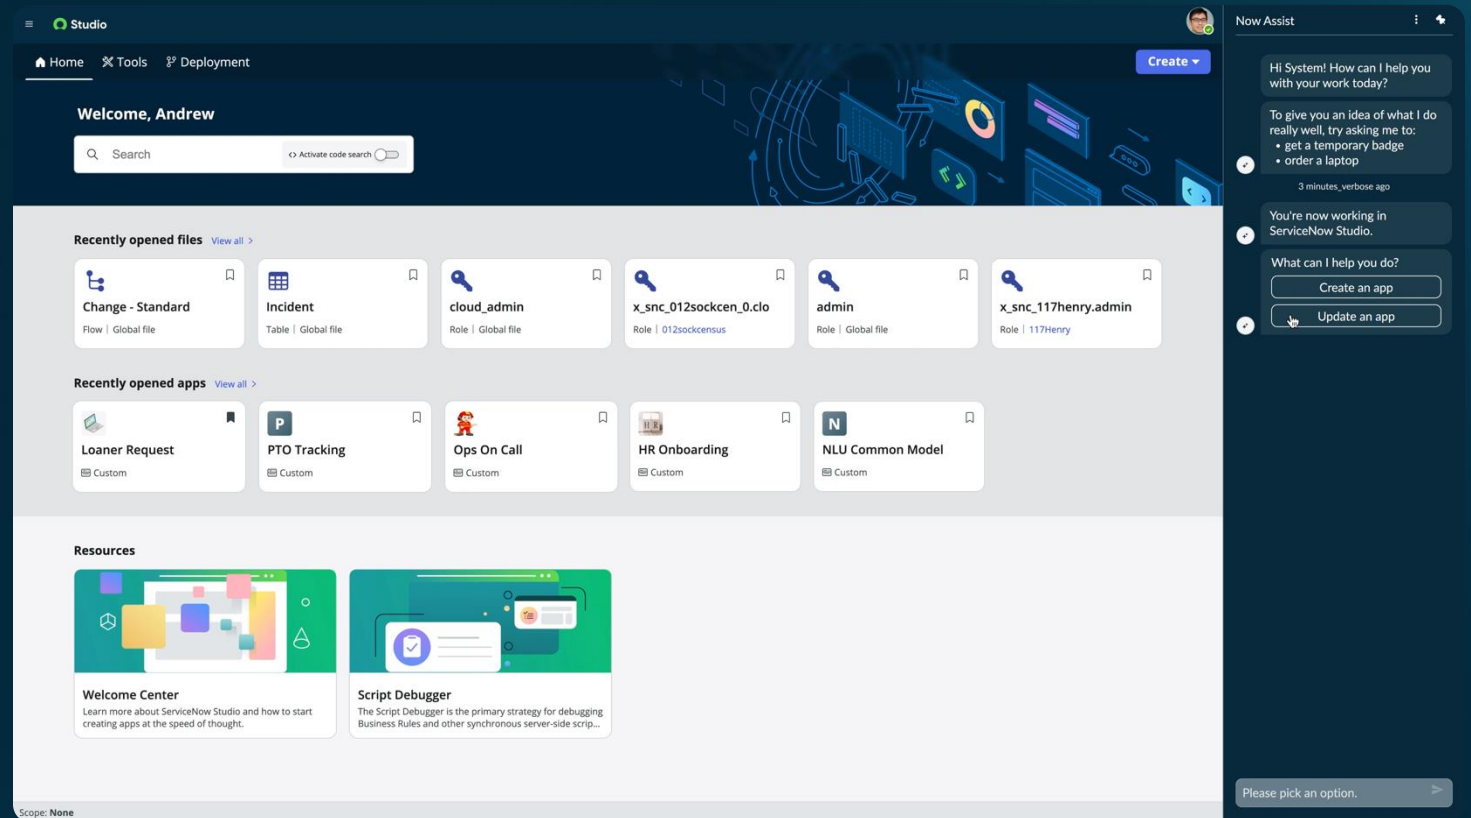

# Application generation

## Gather application requirements.

Have a conversation with Now Assist to describe your application requirements. Generate tables, fields, record producers, forms and ACLs.

## New Xanadu features:

ServiceNow Studio integration. Update features from existing applications. Visual preview of AI generated features simplifies validation and reduces re-work from inaccuracies.

# Catalog generation

**Generate dynamic catalog requests.** Describe your data collection needs to Now Assist including: data types, qualifiers, selectable and default values, references and interactivity and if fields should be mandatory.

**New Xanadu features:** Write with Now Assist integration. Shorten, elaborate, rephrase, or generate content for fields to match their specific needs. It ensures consistent and correct content across catalog items, enhancing clarity and uniformity.

The screenshot displays the ServiceNow Catalog Builder interface. The top navigation bar includes 'servicenow', 'All', 'Favorites', 'History', 'Workspaces', 'Admin', and a 'Catalog Builder' button with a star icon. A search bar is also present. The main content area is titled 'Create catalog item' and features a sidebar on the left with options: 'Now Assist' (selected), 'Details', 'Location', 'Questions', 'Settings', 'Access', 'Fulfillment', and 'Review and submit'. The central workspace is titled 'Now Assist' and contains a large green banner with a graphic of a document and a magnifying glass. Below the banner, a section titled 'Use AI-powered Now Assist to help build your catalog item' explains that Now Assist uses descriptions to generate parts of the catalog item. An example text box shows: 'Example: Create a travel visa request form with start date, end date, destination country, country of birth, passport number and business justification. Make travel start date and passport number mandatory'. At the bottom of this section are two buttons: 'Skip for now' and 'Generate with Now Assist'. On the right side, a panel titled 'How to describe your item?' provides instructions on using generative AI, specifying details, questions, and table names. A small preview of a catalog item is shown at the bottom right.

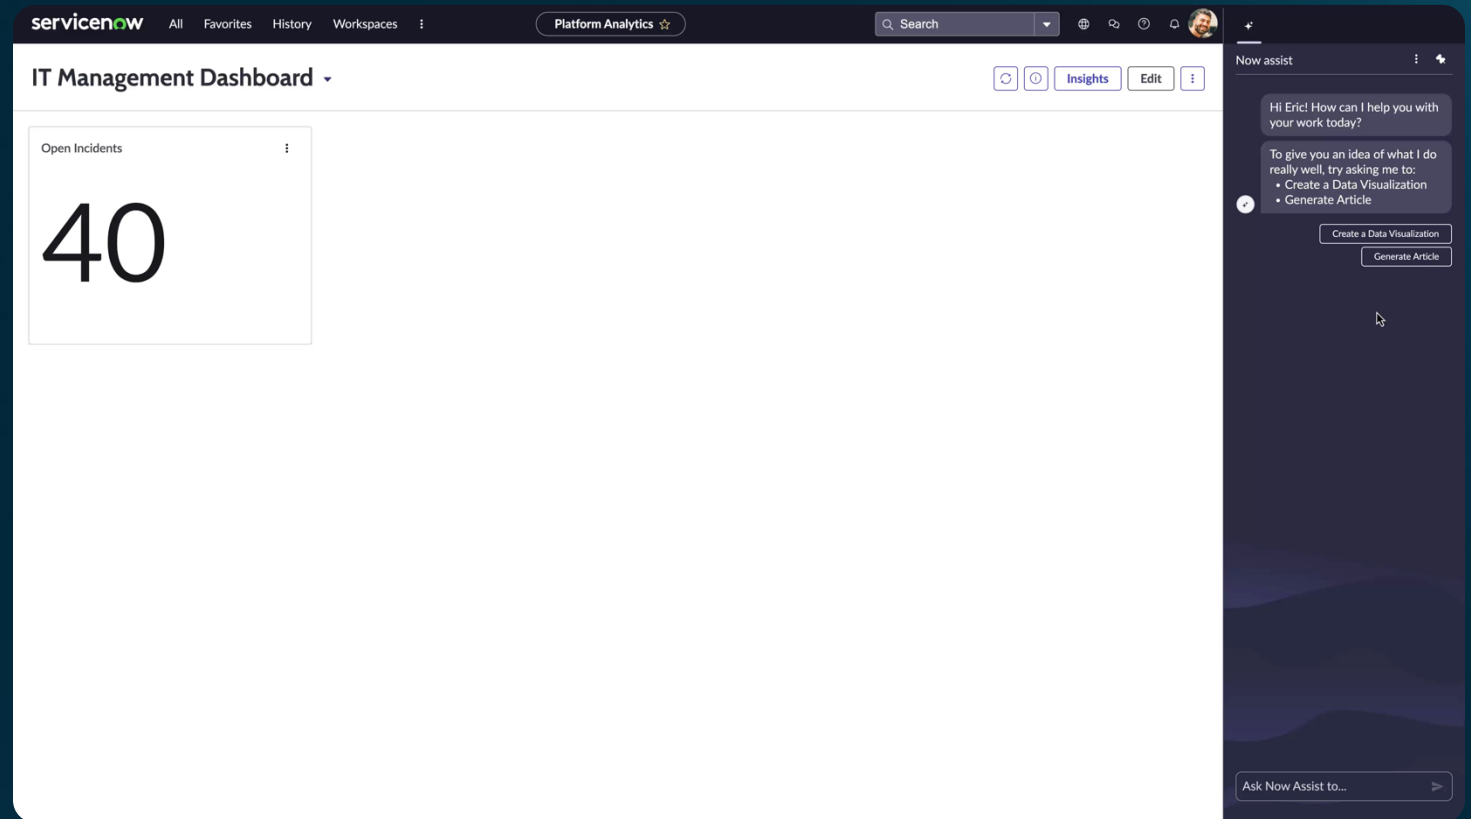

# Data Visualization generation

## Conversational data exploration.

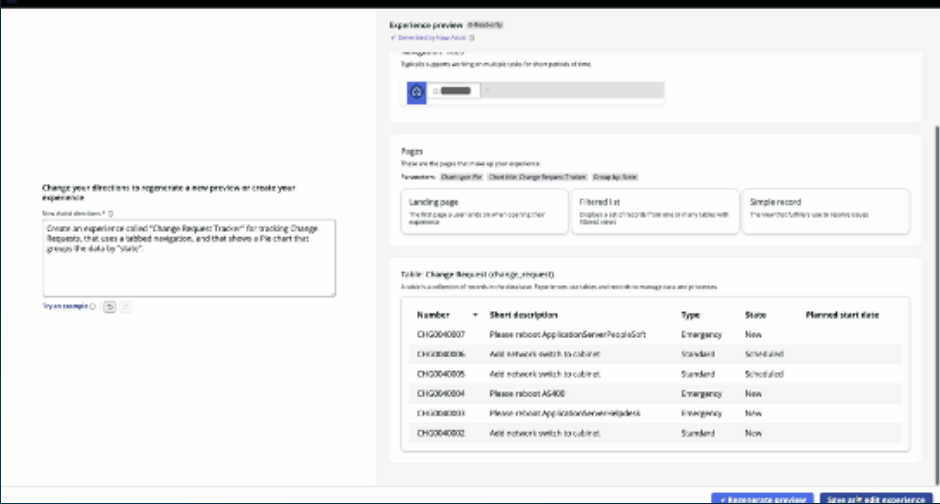

Turn text based data queries into dynamic data visualizations including: chart type, data source, aggregate, trend, grouping and more.

**New Xanadu features:** Additional chart types supported. Add generated visualization to any dashboard. Make changes through follow up prompts for a more conversational experience.

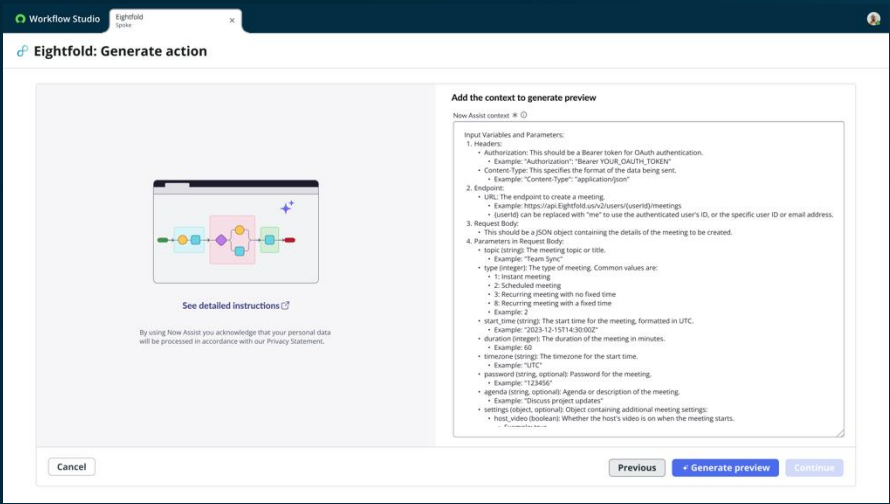

# New Skills in November

## Experience generation

Design interactive UIs from scratch with a generative AI assist

## Spoke generation

Connect systems using generative AI

# Experience generation

## Design interactive experiences.

Prompt Now Assist to build a home, list and records page with navigation and actionability, reducing the learning curve and time it takes to build in UI Builder.

Change your directions to regenerate a new preview or create your experience

Now Assist directions \* ⓘ

Create an experience called "Change Request Tracker" for tracking Change Requests, that uses a tabbed navigation, and that shows a Pie chart that groups the data by "state".

Try an example ⓘ ⓘ ⓘ

**Experience preview** ⓘ Read-only

Generated by Now Assist ⓘ

**Navigation bar**

Typically supports working on multiple tasks for short periods of time.

**Pages**

These are the pages that make up your experience.

Parameters: Chart type: Pie Chart title: Change Request Tracker Group by: State

**Landing page**

The first page a user lands on when opening their experience

**Filtered list**

Displays a set of records from one or many tables with filtered views

**Simple record**

The view that fulfillers use to resolve issues

**Table: Change Request (change\_request)**

A table is a collection of records in the database. Experiences use tables and records to manage data and processes.

| Number     | Short description                         | Type      | State     | Planned start date |
|------------|-------------------------------------------|-----------|-----------|--------------------|
| CHG0040007 | Please reboot ApplicationServerPeopleSoft | Emergency | New       |                    |
| CHG0040006 | Add network switch to cabinet             | Standard  | Scheduled |                    |
| CHG0040005 | Add network switch to cabinet             | Standard  | Scheduled |                    |
| CHG0040004 | Please reboot AS400                       | Emergency | New       |                    |
| CHG0040003 | Please reboot ApplicationServerHelpdesk   | Emergency | New       |                    |
| CHG0040002 | Add network switch to cabinet             | Standard  | New       |                    |

Regenerate preview Save and edit experience

# Spoke generation

**Connect systems simply.** Easily connect systems using API documentation, opening up connections to systems with no structured specifications. Generate activity inputs and outputs, and API paths, parameters, body and authentication.

The screenshot shows the 'dynatrace: Generate action' dialog in the Workflow Studio. The interface is divided into two main sections: 'Add the context to generate preview' on the left and 'Action Preview' on the right.

**Add the context to generate preview:**

- Now Assist Context:** A text area containing API documentation for 'Events API v2 - GET an event type'. It includes details about the request, the application/json payload, the SaaS URL, environment variables, authentication requirements, and parameters like 'eventType'.
- Characters left:** 13828
- Parameters:** A list of parameters including 'eventType' (string), 'path' (required), 'Response codes' (200, Success), and '4XX' (ErrorEnvelope, Client side error).

**Action Preview:**

- Action Properties:** A dropdown menu.
- Input Variables:** A dropdown menu.
- Step Configuration:**
  - Request Details:**
    - Resource Path:** /api/v2/eventTypes/{action > eventType}
    - HTTP Method:** GET
  - Headers:** A table with 'Name' and 'Value' columns. It shows 'Accept' with the value 'application/json'.
- Output Variables:** A dropdown menu.

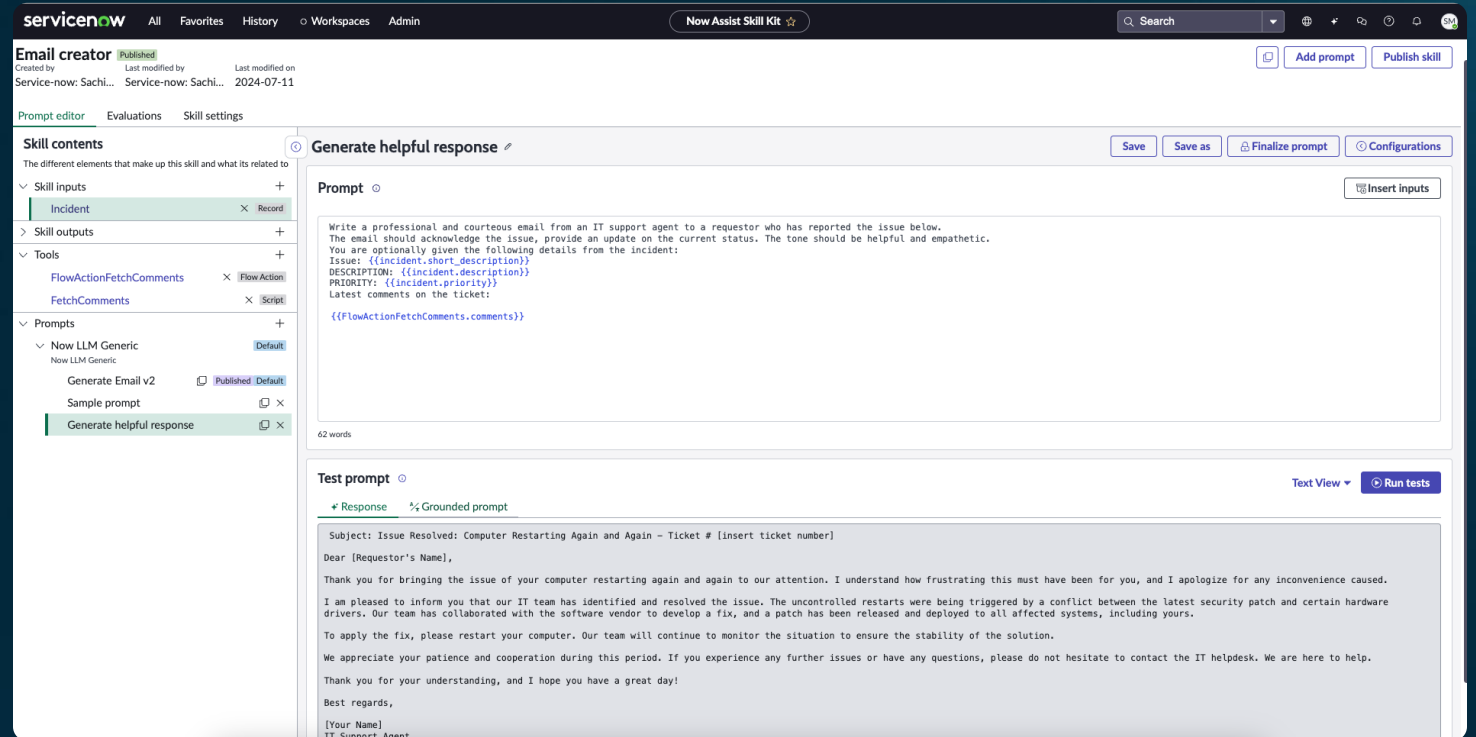

- Buttons:** 'Cancel', 'Regenerate preview', and 'Continue'.

# Now Assist Skill Kit

## Building custom AI solutions

# Now Assist Skill Kit

Create custom GenAI skills using the NowLLM or LLM of your choice. Leverage your custom skills via scripts (today) or the Now Assist Panel (Nov). Administer your skills alongside out of the box ServiceNow offerings

# Now Assist Skill Kit **User Journey**

## 1. Define Provider

Select which LLM to utilize:

Generic **NowLLM**

**BYOLLM**

**Spokes** e.g. Azure  
OpenAI, WatsonX

## 2. Build

Develop your skill by  
configuring the:

Input Sources

Prompt

Prompt Setting  
(Temperature etc)

## 3. Test

Use data from your  
instance to test the  
prompt

## 4. Deploy

Expose your skills via  
UI Action (Core UI and  
Workspace) or Now  
Assist Panel

# Step 1: Define provider

Consider the use case you are building for which determining which LLM provider to use

## 1 Review advantages/disadvantages for each LLM

### Consider:

- Domain specificity
- Tailoring directly to your desired capability
- Adherence to regulatory requirements

## 2 Decide on a provider from the following:

- Generic NowLLM Service
- Spokes e.g. Azure OpenAI, WatsonX
- BYOLLM (using the Generic LLM Connector)

### Now Assist Skill Kit

Create new custom skills and prompts. Publish and activate through your Now Assist Admin.

The screenshot displays the 'Now Assist Skill Kit' interface. At the top, there's a header with the title and a subtitle. Below this is a table with columns: Name, Description, Default Provider, Active, Workflow, Product, Feature, Created By, and Last Updated. A modal window titled 'New skill' is open, showing fields for 'Skill name \*' (with the value 'Propose resolution for case'), 'Description', and 'Default provider \*'. The 'Default provider \*' dropdown menu is open, showing a list of providers: 'Now LLM Generic' (selected), 'Custom LLM', 'Azure AI serverless', 'OpenAI', 'Azure OpenAI', 'Google Cloud AI Studio', 'Aleph Alpha', 'Azure AI managed compute', and 'Google Cloud Vertex AI'.

| Name                                           | Description                                         | Default Provider | Active | Workflow | Product | Feature | Created By               | Last Updated        |
|------------------------------------------------|-----------------------------------------------------|------------------|--------|----------|---------|---------|--------------------------|---------------------|
| Determine Survey Response Sentiment v1         |                                                     | Now LLM Generic  | false  | Other    |         | Other   | platform.pm              | 2024-07-18 20:14:35 |
| Build proposed resolution for similar incident |                                                     |                  |        |          |         |         | platform.pm              | 2024-07-18 14:48:17 |
| Determine Survey Sentiment UAT                 |                                                     |                  |        |          |         |         | elizabeth.orchard@snc    | 2024-07-18 12:16:37 |
| Get ChildIncidents Summary                     | Generate a detailed summary of child incidents      |                  |        |          |         |         | platform.pm              | 2024-07-18 10:27:57 |
| Document Creation                              |                                                     |                  |        |          |         |         | platform.pm              | 2024-07-18 10:24:11 |
| Conversation Summary                           |                                                     |                  |        |          |         |         | gopal.thota@snc          | 2024-07-18 10:23:32 |
| Child incidents summarize                      | Summarize child incidents using the parent incident |                  |        |          |         |         | sachin.modeel@snc        | 2024-07-18 10:22:47 |
| Incident Summarisation                         | Incident Summarisation with small summary           |                  |        |          |         |         | srikant.mallikarjuna@snc | 2024-07-18 10:21:44 |
| Skills calling skills                          |                                                     |                  |        |          |         |         | swaroop.tg@snc           | 2024-07-18 03:24:58 |
| Child Incident Summarization UAT               | Summarization of child incidents                    |                  |        |          |         |         | platform.pm              | 2024-07-17 13:33:59 |

# Step 2: Build

Select the data to provide the LLM with context, and draft your prompt

## 1 Define input sources

Workflows

User experiences

Integrations

Platform Events

Conversations

External Events

Database

Code

## 2 Create and iterate upon your prompt

Seek to curate the output of the LLM to fit your needs.

## 3 Configure the prompt settings

Adjust the model, temperature, and the Maximum number of request tokens

Home > Determine Sentiment of Survey

- Prompts: [Now LLM Generic](#) [Default](#)

#### Prompt name

[Save](#) [Save as](#) [Finalize prompt](#)

#### Prompt

[Insert inputs](#)

You are a customer service representative. Summarize the below incident in no more than 250 words. The summary should only contain two sections "Issue" and "Priority".

You are optionally given the following details from the incident:

```
Incident SHORT_DESCRIPTION: {{incident.short_description}}
Incident DESCRIPTION: {{incident.description}}
Incident PRIORITY: {{incident.priority}}
```

45 words

#### Configurations

Adjust prompt settings to change output quality.

Model: [llm\\_generic](#)

Temperature: [0.2](#)

Maximum response tokens: [1000](#)

Maximum request tokens: [6942](#)

Maximum number of tokens allowed in request.

Usage conditions: [+](#)

# Step 3: Test

Ensure the output of the LLM is what you desire

## 1 Review the response from the provider

### Ask yourself:

- Is it performing the correct action on my data?
- Is the tone correct?
- Does the format align with what I need?
- Can I use this output to drive action?

## 2 Explore the grounded prompt

Check if your input data is getting populated accurately

Survey Response Sentiment Prompt

Update prompt

Configurations

Prompt

Insert inputs

You are an expert in understanding the underlying emotions within text.  
Review the below survey answers and determine what the overall sentiment of the user is, and answer in one word.  
Use the following categories to provide the overall sentiment:  
Negative: If the sentiment is negative in nature  
Positive: If the sentiment is positive in nature  
Neutral: If the sentiment is neither negative nor positive  
The response should only contain the overall sentiment.  
The survey questions and answers are found below: {{RetrieveSurveyResults.survey\_comments}}

2

Grounded prompt

Negative

# Step 4: Deploy

Expose your skill in various areas on the platform

- 1 Select where the skill belongs in Now Assist Admin**
- 2 Decide where your skill is to be surfaced**  
As of the November release you can deploy as a UI action or into the Now Assist Panel
- 3 If choosing UI Action, configure the script to drive action**  
You can dictate how the response from the LLM is used from within the script.

# Discovery

## Framing an AI opportunity

# Key 5

## **What is your strategy for adopting generative AI?**

Qualifying an appetite for and openness to using generative AI. Do they see value in gen AI?

---

## **Tell me about what's in your ServiceNow development backlog.**

Try to gauge priority and scale to assess against capacity and ability to deliver

---

## **What productivity tools do your developers currently use?**

Creator Pro Plus competes in this developer productivity tool market

---

## **How are your development teams structured?**

Generative AI brings development capability to business users

---

## **How long does it typically take to get to a first prototype?**

Adopting generative AI can help rapidly prototype ideas and iterate solutions

---

# What is your strategy for adopting generative AI?

Prospects with a strategy will have a good idea of where in their business the application of generative AI will have the most impact

## Follow ups: has strategy

- How do you evaluate and validate the performance of AI models?
- What are your expectations in terms of model accuracy and performance?

## Follow ups: no strategy

- What's preventing you from adopting generative AI technologies?

# Tell me about what's in your ServiceNow development backlog

Prospects with an overflowing backlog have the most to benefit from the adoption of generative AI development tools

## Follow ups: large backlog

- What are the top 3 projects with the biggest impact?
- What's holding you back from delivering those projects sooner?

## Follow ups: limited backlog

- What's constraining your ability to build on ServiceNow?
  - Maybe they don't see ServiceNow as a strategic development platform

# What productivity tools do your developers currently use?

Prospects who equip their developers with productivity tools recognize the benefits of removing friction

## Follow ups: using

- What tool could your developers not live without?
- Do any of these have generative AI features?

## Follow ups: not using

- What are some areas of friction that could be improved by better tooling?

# How are your development teams structured?

Cross-functional teams benefit by using AI as a bridge between requirements and code

## Follow ups: cross-functional

- What development activities are you opening up to business people?
- How do you translate requirements into stories for developers to implement?

## Follow ups: internal IT

- How could the adoption of development tools business people can use change your approach to development?

# How long does it take to get to a first prototype?

By using generative AI to rapidly prototype ideas, organizations can iterate faster and reduce the time it takes to get to an MVP.

## Follow ups: days/weeks

- How would faster iteration of solutions change the way you prioritize projects?
- What would you do with the time savings if you could get feedback on solutions sooner?

## Follow ups: hours

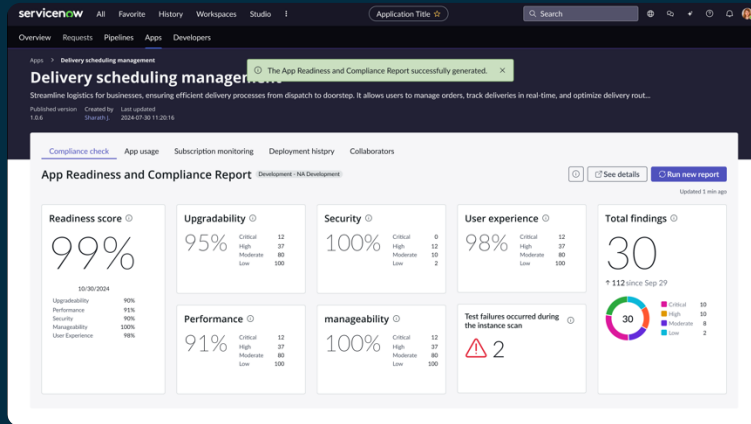

- If you increase the scope of your prototypes how would that change the way you assess solutions?

# Roadmap

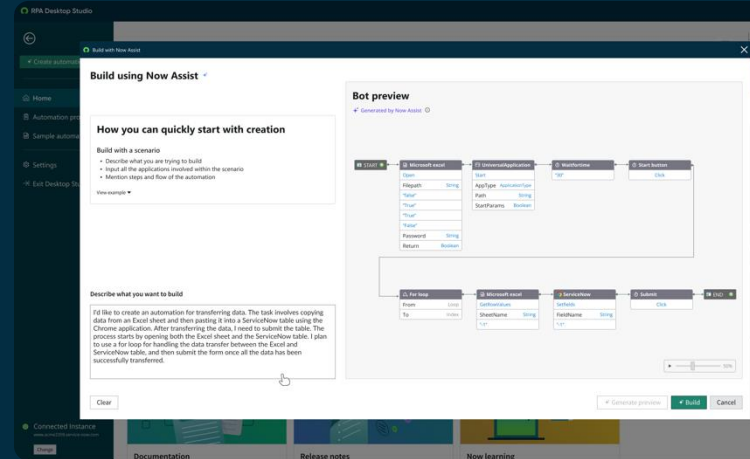

## The future of AI and Low Code

# App Summary generation

Provides **Platform Owners** with a summary of an application and its features to better understand deployment impact.

# Bot generation

Empower **RPA developers** with workflow generation powered by generative AI

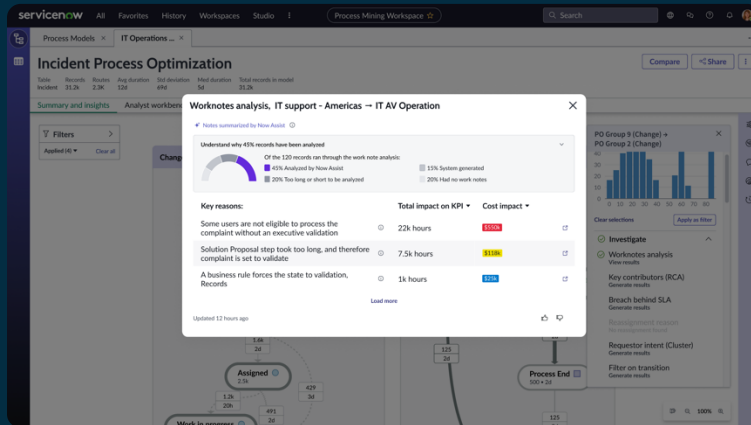

# Test generation

The screenshot shows the 'Test generation' interface in ServiceNow. It includes a 'Tell us about your test and AI-powered Now Assist can generate it for you' section. Below this, there is a table titled 'ATF Test Steps Preview' with columns for 'Display Name', 'Description', 'Table', and 'Execution Order'.

| Display Name       | Description                               | Table | Execution Order |
|--------------------|-------------------------------------------|-------|-----------------|
| Create a user      | lorem ipsumdolor sit amet, consectetur... |       | 1               |
| Record Insert      | lorem ipsumdolor sit amet, consectetur... |       | 2               |
| Record Query       | lorem ipsumdolor sit amet, consectetur... |       | 3               |
| Navigate to Module | lorem ipsumdolor sit amet, consectetur... |       | 4               |

Increase the **productivity of developers and testers**. Reduce the barrier of adoption for automated test framework.

# Work Notes analysis

Help **process owners** better understand stage transitions in their workflows.

# Mobile Card generation

## Web to mobile

Mobile App Builder will generate a native mobile record screen from the web form you select.

How would you like to define the card for the record screen?

Use an existing card

Use a generic card

✓ Use Now Assist

### Preview

ⓘ Read only  
 ✚ Generated by Now Assist

- If this looks good, Mobile App Builder will finalize the mobile record screen.
- Something not quite right? You'll be able adjust layout, styles, and configuration on the next step.
- You'll always be able to go back to change the card or selection card selection method.

The screenshot shows a mobile app interface for a record titled 'Request Approved'. It lists details for a 'Grammarly Business' request, including a description, a request ID (REQ0000309), and a requested item. At the bottom, there are buttons for 'Cancel Request' and 'Message Admin'.

# The future of AI is...

**Cooperative.** Multiple AI working together with people to achieve a common goal

**Business aware.** AI incorporates objectives, operational environment, competitive landscape etc. to aid innovation

**Personalized.** AI tools are customizable and elevate human individualism and creativity

# Call to action

## **Prioritize your strategy for adopting generative AI.**

Create a strong case for adoption of generative AI in your development processes.

---

## **Use Now Assist for Creator to cut through your backlog.**

Reduce the time it takes to get to an MVP.

---

## **Leverage generative AI to improve your ability to innovate.**

Respond faster to changing business demands.
