

CERTIFIED TECHNICAL ARCHITECT PROGRAM

Sovereign Bank Case Study

WEEK 3

Introduction to Architecture Standards, Architecture Blueprints, Current and to-be Architecture

Recap:

Last week you helped align Sovereign Bank's Service Portfolio framework to the ServiceNow CMDB and CSDM.

Objective:

With your understanding of Sovereign Bank's business needs, processes, technologies, and target audiences, establish a visual representation of the solution, how its capabilities support the business, and how the documentation supports IT at the bank. Use the case study to create a capability map reflecting the current state.

Sovereign Bank will realign their contractual footprint with your recommendations, so you do not need to be constrained by current licensing when formulating your recommendations.

Present the current and future architecture, as well as the roadmap to get to the future state. Review the case study and prepare an architecture blueprint presentation.

Your audience will be Li Na (Enterprise Architect).

Desired business outcomes:

Sovereign Bank wants a visual map of its current architecture (based on its legacy tool 'Remedy') and a roadmap for their future architecture.

Key factors to consider:

- The bank has cobbled-together processes that aim to ensure proper data ownership, stewardship, security, and quality, however, they are often circumvented by senior management.
- There are many external platforms, some of which may integrate with ServiceNow, but it's all very confusing to them and they are getting frustrated. They are not sure how they should prioritize integration.

- They are eager to continue with the implementation of ServiceNow capabilities but there is still planning that needs to be done.

Discuss with your small group:

- What information do you need to complete the as-is map for Sovereign Bank's current environment?
- Determine the issues and gaps within Sovereign Bank's business requirements.
- Assess where effort needs to be placed both from the business and from a technology perspective.
- Analyze short, medium, and long-term gaps that will need to be potentially addressed.
- Which standard architecture would be best suited for Sovereign Bank?
- How can you prepare and support the platform owner to understand conceptually what they are about to implement?

Recommendation needed:

Prepare a **10-minute** presentation:

- Discuss the ServiceNow capability map to help Sovereign Bank embark on a digital transformation journey and highlight the capabilities that are in-scope. (You can leverage the [ServiceNow capability map](#) in Now Create if you like.)
- Discuss how your architecture design aligns with a standard framework.
- Discuss the phased interactions map and plan for each phase.
- Describe the final production ServiceNow instance diagram and present the instance structure for managing technical governance.
