

Design and Optimize Intelligent Workflows

ServiceNow offers a comprehensive set of analytic solutions to help in the operations of intelligent workflows. Leverage key performance indicators (KPIs) that are relevant to the customer's business outcomes to ensure workflows are designed and operate as intended.

Design tools

Use available tools tactically and strategically to help the customer align performance management strategy with their business goals, ensuring continuous improvement in their operations.

- KPI Composer helps visually mapping strategic organizational objectives and business outcomes to KPIs.
- Continual Improvement Management helps identify improvement opportunities, and implement phases and tasks to meet performance goals, track progress, and measure success.
- Virtual Agent Topic Recommendations identifies Virtual Agent conversations to help automate and deflect agent tasks such as incidents and service requests.
- Intent Discovery identifies automation opportunities for incident detection.

Operate intelligent solutions

ServiceNow provides solutions help operate intelligent workflows and create a positive user experience.

- Predictive Intelligence leverages Artificial Intelligence (AI) to accomplish specific tasks.
 - AI search helps users find what they are looking for faster.
 - Natural Language Understanding (NLU) enables the system to learn and respond to human-expressed intent.

QUICK REFERENCE GUIDE

Analyze intelligent solutions

ServiceNow provides solutions to help analyze intelligent workflows.

- Performance Analytics is an in-platform process that reports on KPIs and metrics and answers key business questions to help increase quality and reduce the costs of service delivery.
- Reporting creates reports that show the current state of instance data that can be used in standard reports and with Performance Analytics.
- CMDB Query Builder builds complex infrastructure and service queries.
- Metrics measure and evaluates the effectiveness of IT service management processes.
- Data Discovery (NLQ) queries the data in the instance by entering plain language requests into the user interface.
- User Experience Analytics describes usage and adoption of the mobile applications.
- Optimization tools provide process optimization for business processes and workforce optimization to manage and coach teams.
